## assisted instrument management

# STORAGE

## INTELLIGENT INSTRUMENT IDENTIFICATION

AIM™ - Storage identifies instruments, tells technicians where to store them, and allows the technician to enter quantities. The use of AIM results in more accurate inventory data and more efficient instrument inventory management.

AIM™ can also be interfaced with instrument management systems and automated storage systems for seamless workflow.

Please contact us to learn more about what the AIM™ System can do for you.

## www.rstautomation.com

**Advanced Vision Technology**
AIM™ Storage uses advanced AI and vision technology to identify instruments and retrieve storage location information.

**Efficient and Economical**
Accurate instrument identification eliminates the need for instrument marking.

**Effective Compact Design**
Portable table-top design with an easy to operate touchscreen user interface.

**Technician Training**
Can be used for training and education to help technicians learn instrumentation.
